

Amiel Jake A. Baril

BSIT – 41007

SIA2

1. What have you learned in your SIA1?

I just learned a lot during the SIA class. They teach us how to use some tools that we possibly use related to our system, especially focusing on using GitHub to put our projects and works here as our portfolio and some discussion too about building a system and some preparation for capstone also.

2. What are you expecting to me or in SIA2?

I expect that Sir Gab is a really good professor and a true professional, so I anticipate that this semester will be challenging for us. However, I believe it presents a significant opportunity for us to enhance our knowledge, especially since we are now in our fourth year. Many challenges will arise this year nevertheless, despite these expectations, we will do our best to succeed this semester.
